- (b) conducting at least one separation of effluent obtained at the end of step al into at least three fractions: a light fraction comprising olefins, and from which substantially all of the sulfur has been removed, a heavy fraction in which most of the sulfur compounds initially comprised in the gasoline feedstock is concentrated, and at least one intermediate fraction having a depleted content of olefins and aromatics,
- (c1) conducting at least one treatment of the heavy fraction separated at step (b) on a catalyst enabling the sulfur compounds to be at least partially decomposed or hydrogenated,
- (c2) treating effluent from step (c1) on a catalyst so as to decompose the sulfur compounds, and
- (d) conducting at least one step to remove the sulfur and nitrogen from at least one intermediate fraction,

wherein a part of said at least one intermediate fraction obtained from step (b) is mixed with the heavy fraction prior to step (c1).

- 28. A process according to claim 29, further comprising increasing the molecular weight of sulfur compounds present in at least one of the feedstock or the effluent from the selective hydrogenation.
- 29. A process for producing gasoline with a low sulfur content from a gasoline feedstock comprising:

conducting at least one selective hydrogenation of the diolefins and acetylenic compounds comprised in the feedstock; separating an effluent of the at least one selective hydrogenation into at least three fractions; and

conducting at least one treatment of one of the fractions separated on a catalyst enabling the sulfur compounds to be at least partially decomposed or hydrogenated.

30. A process for producing gasoline with a low sulfur content from a gasoline feedstock comprising:

conducting at least one selective hydrogenation of the diolefins and acetylenic compounds comprised in the feedstock; separating an effluent of the at least one selective hydrogenation into at least three fractions; and

removing the sulfur and nitrogen from at least one of the separated fractions.

31. A process according to claim 29, wherein the fractions comprise a light fraction, an intermediate fraction, and a heavy fraction.--

Please add the following new claims:

- --32. A process according to claim 30, further comprising increasing the molecular weight of sulfur compounds present in at least one of the feedstock or the effluent from the selective hydrogenation.
- 33. A process according to claim 30, wherein the fractions comprise a light fraction, an intermediate fraction, and a heavy fraction.--
